

...a fresh approach to
IT Asset Management.

NETSUPPORT DNA v3.0 - OUT NOW!

NetSupport DNA v3.0 incorporates a number of new and highly relevant enhancements designed to help Network Managers meet the support needs of the modern enterprise.

Key among these is the introduction of a new Energy Monitor component that provides department heads with a simple and concise high-level summary of potential energy wastage across an organisation by computer systems that are left powered on out of business hours.

Today's dispersed networks can make it difficult to gain a true picture of your IT Assets but with the inclusion of NetSupport's integrated communication gateway, DNA3 provides secure interaction with your assets, anywhere, over the internet without the need for a VPN or changes to your existing network or firewall configuration.

NetSupport DNA 3 also includes a new and intuitive user experience, with a fresh and flexible interface, engaging charts and a "download to deployed" timescale of as little as 30 minutes.

With full AD integration, enhanced license management capabilities, optional ITIL-based Helpdesk and market leading Remote Control, there has never been a better time to see how NetSupport DNA can save you money and time.
